SUMMARY

I am a PhD candidate in Economics at King's Business School, focusing on the role of large firms in the transmission of shocks and spillovers within production networks.

My research uses firm-level microdata to examine various types of shocks —supply chain, financial, regulatory, technological, and informational— offering valuable insights for economic policy.

I have extensive experience in both academic and policy research and am passionate about translating data-driven insights into actionable policies to aid evidence-based decision-making.

My primary research interests include public, urban, and input-output economics, particularly in the context of trade, and I use microdata to support evidence-based policymaking.

I am committed to conducting rigorous research that informs effective economic and public policy decisions.

WORK EXPERIENCE

OECD

Paris, France

Economic Consultant

2026 - Present

Supporting the Finance, Investment and Global Relations Division (FIG) of the [Environment Directorate \(ENV\)](#), as well as the [National Bank of Georgia](#), with an econometric assessment of nature-related financial risks.
